# Feature contribution of the 16 model features calculated in the training set (n = 1,184) to predict ICB response. The error bars denote standard deviation of feature contribution (left figure →Fig. 1c from paper, right figure → reproduced results)

Comparing ROC for training data (1st row →Fig. 1d from paper, 2nd row → reproduced results)

Comparing ROC for test data (1st row →Fig. 2a from paper, 2nd row → reproduced results)
